Welcome to Space Cadet where you can learn about your Storage. Whether the data on your Computer are Music, Pictures, Movies or documents; it all ends up one day on your hard drive. Most of us don't even realize this is happening until we run out of space. Some think they can just buy more space, but that is not so. The place you are storing that data and information is called the "Storage Space". And that is what Space Cadet is designed to teach you about. What do the numbers

actually mean? The units of storage space and time are called “Bytes” and “Hours”, respectively. This little piece of information will not get you very far. Fortunately, Space Cadet enables you to see just how much storage space each of your items use up. Space Cadet shows the storage sizes of your files along with a Time Bar showing you how long the files are there. As the files are used up, they grow smaller in size and the storage space decreases. What’s really scary is when you run out of storage space, not realizing it, and you are doing something else. Space

Cadet shows you the storage space occupied by your files and folders. It tells you which items are the most large consumers of storage space, such as Pictures and video. It's a tool that will help you pinpoint the files that are taking up the most space on your computer.

Riddle me this, why did 50 Cent come back to double after his fight with Manny Pacquiao? Could it be he's got

something in store for us this weekend as the headline bout at the September 22 rematch between Floyd Mayweather and Saul "Canelo" Alvarez? One thing we know for sure is that 50 Cent won't come back to lose a fight. He's a vindictive son of a gun, so it's likely that he's planning a reprise of his 2009 comeback against 50 Cent: The Game. But now that Pacquiao's megastar status has risen to the point where he has become the biggest thing in boxing, he'll be too big to ignore. What that means is that even though Pacquiao is still the bigger name, the Mayweather-

Canelo rematch is more likely to do better than the first fight. However, it is not impossible that Pacquiao can still be a bigger star in boxing than Mayweather for the foreseeable future, because nobody could ever have envisioned this when the first fight was made. Pacquiao's renaissance this year and next has defied prediction. Pacquiao, like his benefactor and boxing godfather Manny Ramirez, is down for the count, but he's coming back. makes sense that Pacquiao would make the fight with Mayweather because he views Canelo as a dangerous contender, and he has several beneficial belts at stake. But the Pacquiao-Mayweather fight was a \$180 million vanity project by Mayweather on Mayweather's part, to fulfill the goal of the original fight: making Mayweather the biggest star in all of boxing and elevating the stature of the franchise, not just of a single fighter. Yet maybe that's a moot point. Mayweather is 37 and about to turn 38 before he retires. He has one title fight remaining, and

that's in May. If he does beat Canelo and still wants to take on another top star, maybe he will

What's New in the Space Cadet?

Space Cadet is a practical and easy-to-use application, which allows you to keep track of the occupancy percentage for your drives and the available disk space. The occupancy percentage is calculated instantly based on the data included in a specific directory or drive. Performance, stability and speed The app utilizes

standard icons and color mappings, which, although may be considered a bit dated in our current “cosmetically pleasing” era, are sufficient. The application is fast and stable. You can navigate through the different directories or drives and even add in items to the analysis manually, so it's up to you whether you want to sit idle watching the information roll in or actively enter the details yourself. When viewing data from a specific drive, its occupancy percentage, displayable space, files and more are displayed on the right-hand side. You can

sort the drives and files by clicking on the “Sort Ascending” or “Sort Descending” buttons in the toolbar. If you wish to remove some folders from the storage statistics, you can add directory exclusions with the “Add Directory or Folder” button. The application remains clean and clutter-free, which makes it very user-friendly.
