Unlike Windows, where the hardware is fixed and the OS is designed to run only on a specific type of hardware, in Linux the hardware can be anything, as long as the kernel can handle the platform. Linux is usually installed on computers with preinstalled OSes, Linux is also available for devices that do not run an OS, such as phones, Internet-connected cameras and webcams, game consoles, and televisions. Linux in Education After it was released in 2007, the Linux kernel has seen a rapid adoption in education. Since most school-issued computers are either Windows or Mac, adoption is growing rapidly. The first advantage of Linux for schools is its popularity. Unlike Windows or Mac OS, Linux can be installed on any hardware platform. An operating system is mostly a collection of programs. Most of the programs that schools use are available for Linux. The second advantage is that most school-issued computers are now Linux-based. In 2006, only five percent of the computers in K-12 schools were Linux-based. By 2014, that number had risen to more than eighty percent. The third advantage of Linux in education is that Linux has a growing ecosystem. The open source community has thousands of developers, many of whom are educators. This recipe is a little different in the sense that it combines two ingredients in one - flour and milk (with egg white to help it bind). It's a good option to use in place of traditional lasagna, which can be quite heavy and often includes a tomato sauce. It's also another option for when you're in a pinch and don't have access to pasta as your main ingredient (although you can certainly use store-bought frozen lasagna noodles if you don't have any at home). I was inspired to come up with this recipe after a night at my in-laws' house, when their son, Hudson, was little and didn't want anything to do with lasagna because it was made with tomato sauce. I know, I know - not so great - but it was a gift from a friend, so I had to make the best out of the ingredients I had, as well as keep the pasta appetizing and not too heavy. It's so easy, but in order to keep it as a quick, easy dinner for your family, I'm sure this won't be the first time you have to use dried pasta. So, don't worry - even if you have to grind your own wheat or buy the dried stuff at the store, it will work out just fine! Pasta rolls 1 cup flour 1 egg white 1/3 cup milk 77a5ca646e
