AutoCAD LT also offers a number of APIs, including VBA and Visual LISP. The Visual LISP API allows developers to use Visual LISP scripts to access and automate LT features. External Links The Visual LISP documentation is a collection of topics on the Visual LISP language. The language is bundled with the Autodesk Developer Network (ADN), and it is available for free on the web. In addition, a limited number of qualified developers can download the source code and study the programming tools provided. These developers can also use the Autodesk Developer Exchange (ADE) to obtain access to tools for Visual LISP development and technical support. The library also provides a few services, such as API proxy, service provider and reference scripts. With the API proxy, developers can connect to other services via the proxy. The service provider is a service that provides a public interface to the functionality of the Visual LISP development kit. Reference scripts enable developers to create assemblies that automatically generate JavaScript. References External links Autodesk Exchange Apps Visual LISP API

Field of the Invention This invention generally relates to a solid state imaging device and a method of manufacturing the same. 2. Description of the Related Art A CMOS solid state imaging device having a structure in which a plurality of photodiodes and transfer transistors are two-dimensionally arranged, and a peripheral circuit having a plurality of amplifier circuits for each pixel and a control circuit are formed on a semiconductor substrate, is a solid state imaging device that is widely used as a video camera or a digital camera. In this solid state imaging device, the photodiodes and the transfer transistors are formed with a photolithography method on a semiconductor substrate made of, for example, silicon (Si). Also, an interlayer insulation film, an amplifier circuit and a wiring layer are stacked on the semiconductor substrate in that order, and the wiring layer and the amplifier circuit are connected to the photodiode through the wiring layer. In addition, a color filter, an on-chip lens, and the like are formed on a light receiving side of the solid state imaging device. In the process of manufacturing the solid state imaging device, a photoresist used for a photo 5b5f913d15
