Autocad Jutta Humbel Advanced prostate cancer and cardiopulmonary complications: old notions of a new century? Cardiopulmonary

complications in patients with advanced prostate cancer include syncope, atrial fibrillation, acute pulmonary edema, and congestive heart failure. These complications can be classified into four different types: preclinical cardiopulmonary complications, clinical manifestations of the disease, therapeutic complications, and complications of advanced cancer and its treatment. The preclinical cardiopulmonary complications include syncope, atrial fibrillation, pulmonary edema, and congestive heart failure. Patients with symptomatic advanced cancer who were treated with androgen deprivation therapy with or without

chemotherapy may develop clinical manifestations of the disease, which can be divided into two groups: noncardiopulmonary and cardiopulmonary complications. The noncardiopulmonary complications include anemia, bone pain, bowel obstruction, epididymitis, impotence, motor disturbances, and seizures. The cardiopulmonary complications include cardiac arrhythmias, congestive heart failure, pulmonary edema, ascites, and respiratory complications. Therapeutic complications of androgen deprivation therapy include hot flashes, vaginal dryness, and bone loss. Patients with advanced prostate cancer who develop

complications of androgen deprivation therapy have shorter survival rates and poorer quality of life. William Turner (MP) William Turner (ca. 1612 – 1677) was an English politician who sat in the House of Commons in 1645 and 1654. Turner was the son of William Turner of Enfield, Middlesex. He was baptised on 26 March 1612. He was a student of Gray's Inn in 1628. In 1633, he became a sergeant porter of Gray's Inn and served in the Army in the Third Anglo
