AutoCAD is the most popular integrated CAD software used in the industry. Introduced in 1992, the latest version is AutoCAD 2018. It is owned and distributed by Autodesk. Other The company originally released a three-dimensional modeling application for the PC called NetCAD. The ability to create 3-D models, including animations, from drawings was very similar to AutoCAD. NetCAD was also a low-cost entry-level CAD application. In the late 1990s, Autodesk released a lower-cost alternative called 2D Drafting that did not include AutoCAD's feature set, but could do 2D drafting, as well as providing documentation. In 2001, Autodesk released a 2D drafting product called Autocad Student Edition (ASE). After Autocad Student Edition was discontinued, Autodesk returned to the development of the 2D AutoCAD product. An all-new 2D product called AutoCAD LT was released in 2002 as part of Autodesk's Education Edition program. Autocad LT was a low-cost version of AutoCAD, intended for use by students and educators. AutoCAD LT has been upgraded to AutoCAD 2010 in 2007. AutoCAD 2013 was a milestone year for Autodesk as this was the first version that was developed using Silverlight. This version of AutoCAD also marks Autodesk's return to the desktop CAD market, after many years of focusing on the Web and mobile technologies. In May 2010, Autodesk introduced a new licensing model for Autodesk AutoCAD: Autodesk AutoCAD 2009 Standard (EA) and Autodesk AutoCAD 2009 Ultimate (EAA), which included improvements in performance and reliability and most functionality not available in the lower-priced edition. History Autodesk AutoCAD was developed by IRT Software and introduced in 1992. It was originally an MS-DOS application that displayed a Windows console. A Windows application was released in 1994 called NetCAD. An "X" version was released in 1996. The "X" and MS-DOS versions were merged into the Windows "mixed-mode" application, and a Mac version was released in 1997. AutoCAD had a direct predecessor called IRT NetCAD. IRT NetCAD was an early PC-based integrated architecture, engineering, and construction (AEC) CAD product a1d647c40b
