Field of the Invention The present invention relates to an electronic gas gauge system for a gas tank, such as an automotive gas tank, to sense the level of the gas and indicate the level of the gas to provide a signal indicative of the level of the gas contained in the gas tank. 2. Background Art Most gas tanks in automobiles and other vehicles are sealed, rigid tanks which have a substantially constant volume. Many gasoline tanks, for example, are cylindrical in shape, and have a rounded bottom. As a result, they have a constant volume whether or not the tank is full or empty. In such gas tanks, a gauge or sensor is usually provided to detect the remaining gas in the tank. One type of gas gauge or sensor device which b7e8fdf5c8
