FluidSIM Pneumatics and hydraulic simulation software with.Q: Have only one number and no decimal number representation in a string If i have a string like "1.5" and I try to convert it to double the following will happen: ToString() will convert it to "1.5". Convert.ToDouble() will convert it to "1.5". double.Parse("1.5") will throw an exception (the reason is that it doesn't recognize the string as a number) What I want to do is: the string should always be "1.5" (no comma or decimal part). if I do double.Parse("1.5") then it should throw an exception because no valid number has been found (of course I could use TryParse but it is not the point). What is the easiest way to achieve this? A: Double.TryParse(num, out num) From MSDN: If you know the string is a valid double-precision floating-point number, the method returns true and assigns the parsed string to the num parameter. If the value cannot be converted to a valid double-precision floating-point number, the method returns false and assigns the default value of Double.MinValue to the num parameter. Some processes, such as metallization, electroless plating, and many textile finishing processes utilize aqueous or electrolyte-based compositions or solutions for metal plating, depositing organic matter, or depositing other substances, often requiring a chemical conditioning process, or bath. Such processes are used widely to deposit the desired material on the surface of a product. For
