In Evil Ritual you play as the wakened, stuck in a cold and scary dungeon with a bunch of things around, who has to get out and somehow get home to safety. If you don't find a way out of this gloomy dungeon, you can expect to wake up in the morgue. But don't worry, your story does not end here. The game offers no direct way of passing, so you have to find a secret passage and hurry there. Along the way you find creepy notes and messages, mysterious objects, and even a limited number of screamers. Grab all those and use their capabilities to manipulate the walls. As you make progress, you can collect all types of items and use them to solve puzzles. Play your way out of the dungeon to the complete safety. But be careful! There are many ways to pass, but that does not guarantee safety. Be careful, for each step you take you take a step towards death. Key Features: screamers - 9 types of screamers that offer different capabilities (cork the wall, open the door...) items - collect and use them to solve puzzles notes - read them while scouring the dungeon underground passage - collect the clues to find a way out English 1. Thank You I want to thank you for the good time and for downloading the game. 2. Zombie I have found zombies around me and they want to eat me. I have to escape from them, but I don't know how. Do you know? 3. Dominoes Dominoes are very hard to build. I am trying my best, but I'm not getting anywhere. I would be happy if someone helped me to finish it. I want to play dominoes with you. 4. Thank You I want to thank you for the good time and for downloading the game. 5. DeepSky Blue Oh my god! I heard a knock on

the door. I guess someone's come to my home. I will lock the door and go. Bye-bye! 6. What's up? Hello. Where am I? I hope I'm in my house. I'll call my Mom, she'll come and open the door for me. Bye. 7. A Calm Night It's a very calm night. I'm looking for a safe place to sleep. Maybe I could find a good place in that temple. I'll be waiting

What's new:

is a fantasy-themed, online multiplayer PvP (Player Vs Player) game developed by Haemimont and promised "epic battles" by the creators of Armored Warfare.I am playing it for the first time and I like it very much so far. I am thinking about sharing my newly discovered pursuits...check out my BLOG! 18 posts in this topic This is a new experience in game development, imo. I like this site for the PC. In the future, it would be nice if you could remap the "little shoulder buttons"--paddle your monitor, so to speak, and do things like W+1, W+2, W+3, W+X, etc. I use this regularly, but it's a peccadillo as far as buttons are concerned--I guess it's just one of those things you do with a mouse. I used the arrows, though, as they "compose" a little bit with the left and right click. The other two places are perfectly fine. As you will notice in the photo I posted--you can change the button arrangement in the program, but it's very hard to get there. You have to use the keyboard first. It's a 5 step process. You can't just go, "Hey, let me go to the theme screen." It's a step-by-step process that's a pain because you can't efficiently use the arrow keys. I've noticed this with a number of themes out there. They're "templates" that really make the game look like Unreal Tournament or Quake. So, I'd suggest that you use the arrow key to change where you position the weapons or how you move, or the side buttons to do the actual thing, which is always what you must do to use the keyboard. I find the keyboard is best for menu and configurations, and the mouse--for clicking. I was just wondering about that. I assumed that they were real buttons.

Everything looked fine, so I set it as default, anyway. (Sorry, I can't help you with anything else--I just like to enjoy the games!) Share this post Link to post Share on other sites As far as PvP goes...looks like the team has lost focus on the for-pay model. If your goal is to earn a bunch of money, it's not going to be worth $15 to play a game where you only spend a couple

Initially I wanted to implement a generic game engine, as a different kind of a game engine which will allow any kind of game in any language easily on any platform. Therefore all major parts of game engine are separated, and are working alone, not as a component of a bigger component (like the case of unity).Therefore the game engine (different from RPG) is more stable and it was easier to implement new features and fix issues in a short period of time. Lighting, Animation, Sounds and Physics are under engine team. However I developed and implemented these features based on my
