A prominent digital rights group is accusing the Trump administration of hiding how it is delving into your digital life at the behest of corporate telecommunications companies. The Electronic Frontier Foundation (EFF) charged in an amicus brief filed Wednesday with the 9th U.S. Circuit Court of Appeals that the Bureau of Prisons' handling of housing inmates' email accounts constitutes a violation of prisoners' constitutional rights. The Brief of Amici Curiae Civil Liberties Union, Apple Inc., Electronic Frontier Foundation, Google Inc., Microsoft Corp., and Twitter Inc., details how two U.S. federal prisons have permitted companies such as AT&T Inc., Comcast Corp., and Verizon Communications Inc. to use inmates' email accounts to monitor and push updates for their products. "The Brief of Amici Curiae highlights a troubling pattern of telecommunications companies that are treating inmates as a captive market and inserting surveillance into their everyday lives," said EFF Senior Staff Attorney Mark Rumold. Inmates in one case were allowed to play video games while in prison; in the other, inmates received targeted promotions of products and services on their tablets and laptops, EFF said. "The inmates rely on these products and services for their jobs, their education, and their families, and we're concerned they will be stuck with them with no privacy protections," Rumold said. The brief was filed with the court on behalf of national and local labor unions, religious groups, and attorneys, including Electronic Frontier Foundation Legal Director Hanni Fakhoury. The brief also includes the statement of Technology Access for Inmates Executive Director Marjorie Heins.

Q: How to create vertical line chart? I want to create a chart similar to this but in Java. I want to generate a vertical line chart and populate it with values. Any idea how to achieve it? I want the chart to display upto values 35 and 45 Thanks, Pranab

A: Just use an XYChart. You will need a list of Point2D.Double objects containing the x and y values. Each Point2D.Double object should be used to indicate a tick mark on the chart. For example, to draw the vertical line chart using the first dataset, you would write: `XYChart.Series series = new XYChart.Series();`
