Thank you for your help and your time. Ascorbic acid inhibits astrocytic calcium increase caused by glutamate or NMDA in cultured neurons. We studied the effect of ascorbic acid on astrocytic Ca<sup>2+</sup> increase in astrocytes cultured on polylysine-coated glass coverslips and loaded with fura-2. Superfusion of the cells with glutamate (5 mM), kainate (5 mM), NMDA (1 mM) or QX-314 (0.5 mM) did not result in a significant elevation of cytosolic Ca<sup>2+</sup> [Ca<sub>2+</sub>]. Pre-incubation of the cells with ascorbic acid (0.25-2 mM) for 30 min followed by superfusion with glutamate or NMDA caused a significant decrease in the amplitude of the increase in [Ca
