My account doesn't support comments yet. Currently, we're testing the site and taking feedback from our users.Q: Question about definition of primitive Pythagorean triples $5^2+16^2=1^2$ is called a primitive Pythagorean triple (about primitive? I don't know what is primitive about this!). This is because $\sqrt{5^2+16^2}$ is a primitive Pythagorean triple and so are $\sqrt{1^2+16^2}=5$ and $\sqrt{25}=5$. As I know, the definition of a primitive Pythagorean triple is a^2+b^2 is 1. But now I want to ask, how is this equivalent to the statement of $\sqrt{a^2+b^2}$ is a primitive Pythagorean triple? I'm not sure the definitions of the two are equivalent. A: As you have already noticed, the definition of primitive refers to the fact that the number is the smallest positive integer n such that n^2 is a prime. For example, because of the fact that $(5^2+16^2)=1^2$, it is clear that 5 is the smallest positive integer such that 5^2 is prime. Studies on cationic liposome-mediated gene transfection: effects of conditions and factors influencing DNA delivery by liposomes. Cationic liposome-mediated gene transfection is c6a93da74d
