. the best "hindi" OCR program? are there any other programs or methods of doing OCR or I use Google's "Image Search/Text Recognition" function? I want to extract text from a pdf file without OCR-ing it. Only other option I can think of is to read it with PDF-Tran (I have a LOT of PDF files I have to go through) and then search for the relevant text in the text boxes that are already "saved. This works fine and I just want to automate it. Anyone know a solution for this? Thanks. . Graphic Designer/Freelance · 13 Job Postings and 130,577 applied for · 1 Previous post, last post A: Since these are more or less standard text files, you could use a Python solution. To get you started, here is a simple script:

```
#!/usr/bin/env python3
import numpy as np
import sys
if __name__ == "__main__":
    # Indentation and path to file to read from to be tweaked.
    inp_path = sys.argv[1]
    inp_ind = [0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12]
    x, y = np.loadtxt(inp_path, usecols=inp_ind, usecols=(0, 1))
    # Numpys textconv module used to convert the matrix to text.
    y = textconv.textconv(y.flatten(), target='utf-8')
    # Print the results to stdout in readable format.
    sys.stdout.write(y)

```

 You can use this to convert all of the files in some directory to a single file. Next, here is a solution that uses another Python module, tesseract.

```
#!/usr/bin/env python3
import numpy as np
from tesseract import *
# Indentation and path to file to read from to be tweaked.
inp_path = sys.argv[1]
inp_ind = [0, 1, 2, 8, 21, 33, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99]

```
